INTEGER Innovation : Introduction Proposal

First of all, I would like to introduce you about this noble concept that "**INTEGER Innovation**" has coined in for INDIA.INTEGER Innovation itself describes by its form "**In**tegrating **Te**chnology in **G**raduates and **E**ntrepreneurs for **R**evolution"

I really appreciate your affirmative gesture and would like to take this opportunity to introduce you about this organization with this mail.

We are a group of technical people bringing with us years of experience working for Fortune 50+ multinational companies and organizations, supporting them in technology to achieve the change they sought. We have also witnessed few of these companies growing manifolds year after year, and after thorough research we concluded that the reason for such progress is the timely technology adaption.

The concept of providing Innovative way of representing Corporate Technical Education has always been in my mind since I started my career a decade ago and over time it got strengthen up with the technology exposure I had. I was waiting for the right time and like-minded people to join me in this noble cause and finally I found some.

Yes, we are co-passionate people pooled out of IT MNCs and would like to bring this big change in our country. We focus to bring this change in the society as well, where upbringing and psychology of every other person but each one should feel proud to innovate something out of technology.

We believe that INDIA having 1.25 billion people can be the country of world's best strategist, planners or great businessmen, also it has the capability to cultivate more innovators and entrepreneurs in Technology space as well. In our research we found that in the last 25 years of Indian Technology paradigm; India has produced technology innovators which can only be counted on fingers.

We want to empower such technology workforce of INDIA by enabling them at the right stage i.e. when they are saturated with academics in various knowledge institutions and are ready to explore the outer (Corporate) world of new possibilities.

We want to bridge the gap between what is taught during graduation and what is actually being used in the corporate world today. Students of India should not be tagged up as "Fresher" in these industries and should be able to contribute in live production sites from the very first day of their joining. Our support and guidance will not only make them confident to face the interviews of their dream companies but will also place them on the other side where they will have the liberty to choose among companies and question them about their business.

Sometime, post receiving offer letters also students feel concerned about joining dates. We consider this as a **loss of talent and an lost idea** that could have been potentially been a technological innovation.

Our mission is very special to us and we are very firm to change the thought process of the society, so that one day people will be able to work closely with technology, We have structured our organization into two major domains :
1) Technology
2) Entrepreneurship

Technology embeds:
This include the latest technologies which are used in various I.T companies. We make the students comfortable with these technologies so that they
can learn easily and fast with the practical sessions. This is conducted through seminars and workshops and we relate them that how these technologies can be implemented in real environment which is the backbone of I.T industry i.e. real practical knowledge.
We will provide the demo sessions to students which are related to corporate world and how it is implemented in I.T companies. We will make them feel the real corporate environment so that they grow professionally stronger and conceptually more talented. Professional development interaction with CEO, Co-Founder, Founders, Executives of the well settled firms, tips and tricks by them and many more lots of Professional career building events.
We focus on core concepts which are asked in interviews and written tests.
We will clear their concepts and will help them to crack an interview because we are software professionals in I.T Companies and we know where students lack.

Entrepreneurship embeds:-
In this field/domain we cater all the needs of the young students who want to pursue their career in Technology Consultants domains and many more…..
The expertise professionals from our organization and working in corporate sectors to mentor them by delivering workshops, seminars, Career cracking nuts sessions, Professional development interaction with CEO, Co-Founder, Founders, Executives of the well settled firms and many more lots of Professional career building events.

For Talented and Innovative people
In this module we are trying to promote the hidden talent in different students from all colleges, universities and helping them to promote their hidden innovative talent with the help of the social media and including them in our R&D team to work upon their ideas and we will help them to overcome their obstacles so that they feel confident and come up with their innovative inventions.
In this we search and pick right talent to be used in right direction and guide them to explore their dreams come true.
